CAPITAL STRUCTURE

19 Million Common Shares	\$100 Million (NAV)
6.00% Series B Cumulative Preferred Shares	\$24 Million

Convertible Investment Risk. Similarly to straight debt, a convertible bond contains the risk of the issuer not being able to repay the principal at maturity. Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default. Interest rate risk also refers to the risk that bond prices generally fall as interest rates rise and vice versa. Preferred securities may include provisions that permit the issuer to defer or omit distributions for a certain period of time and reporting the distribution for tax purposes may be required even though the income may not have been received. Further preferred securities may lose substantial value, due to the omission or deferment of dividend payments.

Leverage Risk. The use of leverage, which can be described as exposure to changes in price at a ratio greater than the amount of equity invested, through the issuance of preferred shares, magnifies both the favorable and unfavorable effects of price movements in the investments made by the Fund. The Fund's use of leverage in its investment operations subjects it to substantial risk of loss.

Investors should carefully consider the investment objectives, risks, charges, and expenses of the Fund before investing.

The Fund's NAV per share will fluctuate with changes in the market value of the Fund's portfolio securities. Stocks are subject to market, economic, and business risks that cause their prices to fluctuate. Investors acquire shares of the Fund on a securities exchange at market value, which fluctuates according to the dynamics of supply and demand. When Fund shares are sold, they may be worth more or less than their original cost. Consequently, you can lose money by investing in the Fund.

(a) Returns represent past performance and do not guarantee future results. Investment returns and the principal value of an investment will fluctuate. Current performance may be lower or higher than the performance data presented. Visit www.gabelli.com for performance information as of the most recent month end. Performance returns for periods of less than one year are not annualized. The Standard & Poor's 500 Index is an unmanaged indicator of stock market performance. The Bloomberg Government/Credit Bond Index is a market value weighted index that tracks the performance of fixed rate, publicly placed, dollar denominated obligations. The Lipper Convertible Securities Fund Average reflects the average performance of open-end mutual funds classified in this particular category. Dividends and interest income are considered reinvested. You cannot invest directly in an index.

(b) Total returns and average annual returns reflect changes in the NAV per share, reinvestment of distributions at NAV on the ex-dividend date, and adjustments for rights offerings and are net of expenses. Since inception return is based on an initial NAV of \$10.00.

(c) Total returns and average annual returns reflect changes in closing market values on the NYSE, reinvestment of distributions, and adjustments for rights offerings. Since inception return is based on an initial offering price of \$11.25 on March 31, 1995.

(d) The Fund converted to closed-end status on March 31, 1995 and had no operating history on the NYSE prior to that date.

(e) From June 30, 1989, the date closest to the Fund's inception for which data are available.

(f) The Bloomberg Government/Credit Bond Index inception date is January 29, 1999.
