5.20% Series B Cumulative Preferred	\$8 Million

**Convertible Investment Risk.** Similarly to straight debt, a convertible bond contains the risk of the issuer not being able to repay the principal at maturity. Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default. Interest rate risk also refers to the risk that bond prices generally fall as interest rates rise and vice versa. Preferred securities may include provisions that permit the issuer to defer or omit distributions for a certain period of time and reporting the distribution for tax purposes may be required even though the income may not have been received. Further preferred securities may lose substantial value, due to the omission or deferment of dividend payments.

**Leverage Risk.** The use of leverage, which can be described as exposure to changes in price at a ratio greater than the amount of equity invested, through the issuance of preferred shares, magnifies both the favorable and unfavorable effects of price movements in the investments made by the Fund. The Fund's use of leverage in its investment operations subjects it to risk of loss.

(a) Performance returns for periods of less than one year are not annualized. Returns represent past performance and do not guarantee future results. Investment returns and the principal value of an investment will fluctuate. The Fund's use of leverage may magnify the volatility of net asset value changes versus funds that do not employ leverage. When shares are sold, they may be worth more or less than their original cost. Current performance may be lower or higher than the performance data presented. Visit [www.gabelli.com](http://www.gabelli.com) for performance information as of the most recent month end. The ICE BofA U.S. Convertibles Index is a market value weighted index of all dollar denominated convertible securities that are exchangeable into U.S. equities that have a market value of more than \$50 million. The Bloomberg Balanced U.S. Convertibles Index is a market value weighted index that tracks the performance of publicly placed, dollar denominated convertible securities that are between 40% and 80% sensitive to movements in their underlying common stocks. Dividends and interest income are considered reinvested. You cannot invest directly in an index.

(b) The Fund's fiscal year ends on September 30.

(c) Total returns and average annual returns reflect changes in the NAV per share, reinvestment of distributions at NAV on the ex-dividend date for the period beginning November 2015, and are net of expenses. Total returns and average annual returns were not adjusted for the 2004 rights offering. For the period from December 2008 through October 2015, distributions were reinvested on the payable date using market prices. From inception through November 2008, distributions were reinvested on the payable date using NAV. Since inception return is based on an initial NAV of \$9.30.

(d) Total returns and average annual returns reflect changes in closing market values on the NYSE American and reinvestment of distributions.
